How to run the server:
- Run mongo on port 3001, and create user called "CommunityFundModel" with password "00716" (both without quotes)
- Then run command
  - $node app.js
  - Assuming in the correct directory

Functionality:
- Path: "localhost:3000/"
  - Main page, with site information
- Path: "localhost:3000/login"
  - Log in page, with option to register
- Path: "localhost:3000/register"
  - Page to register a new account
- Path: "localhost:3000/profile"
  - Without given id, shows logged in user's profile, with options to edit information
  - Or else shows the given user's profile
  - Project section has links to the project pages
- Path: "localhost:3000/project"
  - Displays info of a specific project, given the id
- Path: "localhost:3000/create_project"
  - Creates a project with the information

Backend:
- "/do_create_project":
  - Gets called when create_project form is submitted
- "do_edit":
  - Gets called when profile editing forms get called
- "do_edit_interest":
  - Edits the interests of a user
- "do_login":
  - Called when login form is submitted
- "do_logout":
  - When logout button is pressed, it's called
- "do_p_edit":
  - Gets called when editing info of a project
- "do_p_edit_description":
  - Edits the project description
- "do_p_edit_interest":
  - Edits the project categories
- "do_register":
  - Registers the user
